

- [Add a banner image](#)
- [Install FAQMaker Stylesheet](#)

Add a banner image

Open the Page Inspector, select the 'Styles' tab at the top and then click the 'Banner/Header Image'. Choose one of the file names listed for your banner.

Now, navigate on your computer to /Users/username/Library/Application Support/RapidWeaver. Right-click on NSPThree.rwtheme and choose 'Show Package Contents'. This will show open the folder of files that make up the theme. In that folder is another folder called 'images'. Copy and paste the image you want to use for the banner into this 'images' folder and rename it according to the file name you chose in the page inspector (i.e. banner01.jpg, banner02.jpg, banner01.png, etc.).

Click Preview and voila!

Note: Banner images should be 140px in height and be 600px wide when the 'Logo' option is turned on – 902px wide when 'Logo' is turned on.

IMPORTANT: Any square/rectangular logo or banner image will flow over the large rounded page corner. You will need to have the rounded corner on the opposite side of the banner or choose Square from the Page Background style settings.

Install FAQMaker Stylesheet

1. Navigate to User/Library/Application Support/Rapidweaver/.
2. Right-click the FAQMaker plugin and choose Show Package Contents.
3. Inside the plugin, navigate to Contents/Resources/.
4. Drag the NSPThree_fm.css file that came with the theme into the Resources folder.
5. Open Rapidweaver (or restart if it was open when you placed the new file). Create a new FAQMaker page or select an existing one.
6. Open the Page Inspector and click the Page tab at the top right. Select NSPThree from the Web Theme pull down menu.
7. Click Preview and *voila!*

Note: When you upgrade to a new version of FAQMaker you will need to re-install the NSPThree_fm.css file as it will be discarded when you delete the old plugin and install the new one.
